The fruitful and stimulating road to reasonVon Manfred SchiederA book that everybody, whether believer or atheist, not just may read but should read, though it is particularly suitable for those hovering on the brink between belief and

unbelief. Written with kindness towards those who still remain chained to the cages of religion, for the author himself had been imprisoned there for many decades, since he was raised within the bonds of a family of believers, and he himself kept spreading, for many years, what he was convinced to be the "good news" on radio programs, to then slowly move away through a painstaking journey searching for truth and, thus, discovering atheism, and entering the limitless, bright realm of reality, a journey during which he left behind the flimflam scriptures and its bags filled with senseless lies, make-believe, contradictions and absurd "revelations," but bare of science, truth and knowledge. Seth Andrews is now the creator, Webmaster and manager of one of America's main atheist WebPages: The thinking Atheist, for the farewell to faith requires the engagement of a THINKING brain that has left aside, by a long and deep process of reasoning, all the fables of belief. He wrote about this journey with good humor, to place here and there a smile on the reader's face. I wish Andrews all the success he deserves in his most worthwhile campaign to lead many believers to unbelief. It would do so much good and, yes, truly better the world and people's life, if they were to read "Deconverted". This review has been written by an age long atheist who enjoyed Seth Andrews' spirited style through which he described his long, difficult voyage from mental blindness to the clear and forceful sight of our unique existence as truly human beings among the fog of superstitious believers who claw at us with the intention of keep mankind in the dungeons of creed. For atheism, which is by no means a religion, as believers like to call it, thus producing, unknown to them, a jokeful contradiction in terms that I leave them to find out by themselves, is a peaceful and productive movement. As Andrews himself wrote in his book: Who is the last atheist that sawed the head off of an infidel, or sentences a shrouded woman to death or disfigured her for displeasing an oppressive husband, or strapped explosives to his belt to kill hundreds in a public square, or publicly hung a homosexual, or drove planes into buildings where peaceful, productive people were at work? Atheism points out people whose aim in life is to be peaceful and productive, using their brains to lead a fruitful existence. Besides all further positive goods, it produces peace, a most needed environment for human life, an environment that religions, in spite of its continued promises, always avoided and hindered to produce, thus showing that even this claim is a religious fake.

Kurzbeschreibung "...and then Noah loaded the dinosaurs onto the ark." AND THEN THE DINOSAURS BOARDED NOAH'S ARK. Assertions like these seem comical until you realize that many Christian parents aren't kidding when they teach them to their children as facts. Every day, impressionable young minds are conditioned to blindly accept wild biblical tales of floating zoos, talking shrubbery, 900-year-old Humans, the undead, curses, levitation, demon/human hybrids and men who obtain super-human strength from the length of their hair. Allegiance to these teachings is expected, often demanded. Curiosity is muted. Doubt is frowned upon as a sin. And for those who dare to raise a dissenting hand, the threat of Hell looms ominously. His attempts to reconcile faith and the facts led him to a conclusion previously unthinkable, and this once-true believer ultimately became the founder of one of the most popular atheist communities on the internet.
